We all use the internet to get information on a daily basis, from news to the latest movie release to research papers. With so much information available, it is important to know how to s... This LanguageAnalyzer is based on the tree model, where each

unit (word, phrase, sentence) has a part-of-speech (POS) tag and a gloss. The data was provided by several projects and came together in a repository. The tree is the original structure of the data and it was presented here in many ways, from a tree representation to a more human readable representation. There are many examples of POS tagging and glosses and if you need one, there are simple configurations. If you want to know how to configure the XML data, view the README.txt. The English tree model comes from the Stanford part-of-speech tagger and the glosses were created by Chris Ganne. The models were built upon the wordnet project. I built the software to enable: * quickly browsing the tree * creating a browsed tree as another file with a custom visualization * a...
